

Even Smokers Enjoy
Clean Air!

EXPERIENCE AMAZING RESULTS WITH HIGH EFFICIENCY COANDA AIR CLEANERS!

*Is your business competing for customers and employees?
Don't let dirty air wipe out your profits!*

Clean air is a critical element in today's challenging and aggressive business environment. Both customers and employees demand clean indoor air and we can make it easy and inexpensive to meet their needs. Also, air cleaners reduce utility costs by keeping the air conditioning coils clean and destratifying heated or cooled air. Our superior products are unparalleled in quality, air cleaning performance and increasing your return on investment.

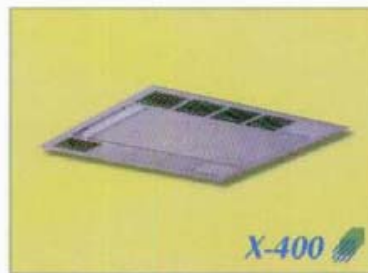

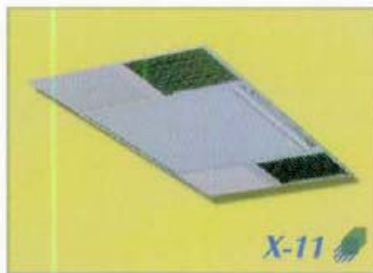

Our comprehensive line of air cleaning equipment uses a wide range of application-specific state-of-the-art technologies to remove virtually all types of airborne contaminants. Most of our commercial air cleaners utilize the Coanda airflow principle to ensure complete mixing and cleaning of indoor air. Functional design makes our durable equipment quick & easy to install.

Let our decades of experience in air quality control save you money, improve your business & help you generate a stronger bottom line.

CHOOSE THE AIR CLEANER THAT FITS YOUR BUILDING BEST!

Our attractive surface mounted air cleaners are ideal for businesses with sheetrock or other hard ceilings. These units simply attach to or are hung from ceiling joists and can be plugged into a nearby outlet. No ductwork required.

Our flush mounted air cleaners are virtually unnoticeable! They fit into drop ceilings and feature contemporary styling. Designed for optimum noise control, these units are ideal for quiet environments often associated with drop ceilings. No ductwork required.

Ducted, self-cleaning and other models are available especially for large applications. Call your representative for details.

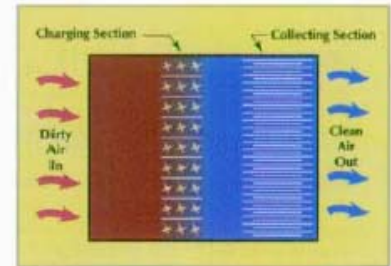

YOUR CHOICE OF COST-EFFECTIVE TECHNOLOGIES

Electronic Air Cleaners are optimal for tobacco smoke and very small particles: exactly what you need for cigarette, cigar and pipe smoke! Developed from industrial-grade air cleaning technology, two-stage electronic air cleaners place a positive charge on the smoke particles as they enter the electronic cell. The charged particles then pass through the alternately charged washable metal plates in the collector section. The negatively charged plates attract the smoke particles just like a magnet (negative plates attract positive smoke particles). With no filters to replace, maintenance is limited to just washing the electronic cells! And, electronic air cleaners are the most energy efficient; check the specs!

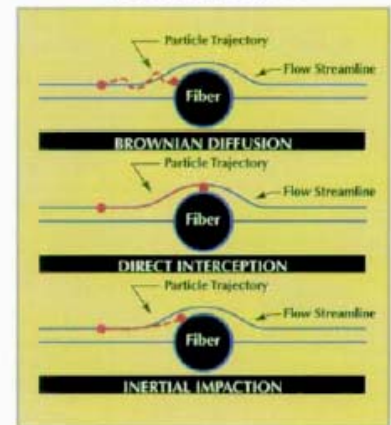

Media Filtration Air Cleaners are also excellent for removing airborne contaminants and we have a complete line featuring this technology. The NEW EverClear™ and CM-12 utilize a standard 95% D.O.P. @ .3 micron hospital grade HEPA type filter. The M67 is available with optional 95% Efficient Extended Service Filter. This means we offer you the most air cleaning media per dollar. More media area allows for longer filter life and less frequent filter replacement, saving you time and money!

Carbon Adsorption Air Cleaning is the technology of choice for the removal of gases and odors. Our CM-12 air cleaners are available with up to 22 pounds of activated granular carbon blend. The EverClear™ is available with up to 44 pounds of activated granular carbon blend. No other manufacturer offers so much air cleaning power in such a compact package!

Electronic Air Cleaning

Media Filtration

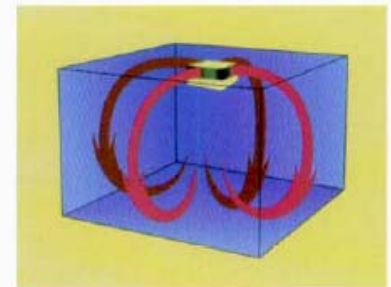

SELECTING AN AIR CLEANER

TECHNOLOGY: Our comprehensive product line allows you to choose the best technology fit for your business; Electronic or Media filtration. Electronic air cleaners excel at catching fine smoke particles, use less energy and the durable cells are easily cleaned so there are no costly filters to replace. Media air cleaners are also highly efficient at capturing fine smoke particles, the HEPA – type filters are long lasting & disposable and the media air cleaners can be ordered with significantly greater amounts of activated granular carbon than electronic air cleaners.

MOUNTING: Our equipment is easily installed. Selection of the most appropriate air cleaners is determined by the type and height of the ceiling in your business. The EverClear™, X-11 and X-400 are designed to install flush in a commercial drop ceiling. The C-12, CM-12 and the M67 are designed for surface mounting. All of our surface mounted air cleaners come standard with a 10-foot power cord (M67 has 8-foot cord) with a molded plug.

Coanda Air Pattern

Saves you money-no ductwork necessary!

IMPORTANT: If you have been disappointed with the result of ordinary air cleaners, be sure to request information on the innovative COANDA models. You will see why this new high-efficiency design gets excellent results when others fail.

Our wide range of products offers air cleaning technologies and mounting styles to meet any business need. Call us today for more information and a quotation for equipment optimized to meet your specific requirements.
